

STZA Finance Platform

AI-powered fractional finance — Bring Your Own AI

What it is

A platform that connects your AI assistant (Claude, ChatGPT, or Gemini) directly to live Xero accounting data. Ask questions about your books in natural language and get instant, formatted answers — aged debtors, P&L variance, trial balance, bank positions.

How it works

1. Connect	2. Ask	3. Act
Authorise your Xero org via OAuth. Platform stores nothing — queries live data on demand.	Open your AI of choice. Ask: “Show me who owes us money and how overdue.” Get a formatted table in seconds.	Review, flag, decide. Post journals, prepare payment runs, generate board commentary.

Why Bring Your Own AI?

For you (the user)	For us (the platform)
• Use the AI you already pay for • Conversational, not click-heavy • Works in Claude, ChatGPT, or Gemini • No new interface to learn	• Zero per-token cost • Revenue from platform access fees • Scales without AI compute costs • One API serves all AI surfaces

What's live today

- Xero integration: trial balance, P&L, balance sheet, bank summary, aged receivables/payables, chart of accounts
- Multi-entity support: manage multiple companies from one connection
- Agent roles: Financial Controller, FP&A, FM2, AP Clerk — each with scoped expertise
- Journal posting: prepare and post manual journals with audit trail
- Operational portal: queue structured work, track agent runs, see costs

Who it's for

Fractional CFOs and finance directors managing multiple SME clients. Accounting firms looking to scale advisory with AI. Finance teams that want to query their books without switching tools.
